ABOUT ME

Software engineering student with a passion for AI, driven by a strong sense of initiative and a love for technical challenges. Deep interest in coordination and project management roles, with proven team leadership experience. Demonstrated ability to work both independently and collaboratively, with a genuine desire to learn, grow, and actively contribute to impactful projects.

SKILLS

Programming: Python, C++, Java, SQL, Bash, JavaScript, HTML, R

Tools: Docker, Linux, Git, Airflow, Azure, Power BI, Figma, Jenkins

Languages: English, French, Russian, Spanish, Korean

EDUCATION

1/2026 – 2/2027 **Professional Master's in Machine Learning** — ***Université de Montréal / McGill - MILA***
Expected — Montréal, Canada

9/2021 – 12/2025 **Bachelor of Software Engineering** — ***Polytechnique Montreal***
GPA: 3.4 / 4.0 — Montreal, Canada

2/2025 – 6/2025 **Bachelor of Computer Engineering** — ***Korea University College of Engineering***
Academic Exchange — Seoul, South Korea

EXPERIENCE

6/2025 – 9/2025 **Data Scientist & AI Intern** — ***Pratt & Whitney***
- Developed predictive models to estimate engine remaining useful life, enabling better maintenance planning and reducing unplanned downtime by 15%.

`Python / Scikit-learn / PyTorch / Pandas / NumPy / MLflow / Jupyter`

5/2024 – 9/2024 **Data Scientist Intern** — ***Radio-Canada / CBC***
- Designed an AI-powered unified indexing system centralizing internal content sources for semantic and keyword-based document search (15 M + elements and used by 100+ employees).
- Implemented large-scale embedding generation via Azure AI Search; evaluated models.

`ELK / ETL / Airflow / Python / Azure AI Search / Hugging Face / Cohere`

9/2023 – 12/2023 **Full-Stack Developer Intern** — ***Stingray***
- Optimized websites using Next.js (SSR), improving performance by 12%.
- Applied analytics to drive improvements in an Agile setup with CI, testing, and code reviews.

`Next.js / React / Node.js / TypeScript`

5/2023 – 9/2023 **Business Intelligence Analyst (Part-time)** — ***Van De Water***
- Automated data collection and analysis via Excel macros and standardized Power BI reports.

`Excel / Power BI / Visual Basic`

PROJECTS

Personal Project **Weather-Based Disease Outbreak Prediction** — ***GitHub***
- Predicted outbreaks from climate data using classification models (Logistic Regression, SVM, Decision Trees) with F1-score and AUC-ROC evaluation.

`Python / Jupyter / pandas / scikit-learn / Matplotlib / FP-Growth`

Personal Project **Harmonic Hunch** — ***GitHub***
- Built an interactive game using AI models (Demucs, DALL·E-3) to generate real-time audio tracks and visuals.

`React / Next.js / Node.js / TypeScript / WebSocket / Demucs / DALL·E-3`

Academic Project **AI Agent** — ***GitHub***
- Developed an AI agent for a strategic game using local search, heuristics, and constraints.

`Python / MiniZinc / Genetic Algorithms / Local Search`

EXTRACURRICULAR ACTIVITIES

1/2024 – 8/2024 **Teaching Assistant – Discrete Mathematics** — ***Polytechnique Montreal***
- Led review sessions, graded assignments, and supported 80+ students.

1/2024 – 5/2024 **Sponsorship Director** — ***PolyAI Hackathon***
- Raised over $22,000 in funding and led a sponsorship team with weekly meetings.
